

Application No. 10/581,470
Reply To Office Action Dated March 18, 2008
Response Dated June 18, 2008

In the Specification

Please amend the second full paragraph on page 5 as follows.

The higher the temperature measured by the sensor 30, the smaller the angle α set, i.e. the air jet is correspondingly directed more steeply into the cabin. If the temperature measured by the sensor 30 is e.g. 25°C, i.e. the cabin is to be heated up due to the environmental and operational conditions, the angle α can be within the range of from ~~40°C to 30°C~~ 10° to 30°. If the temperature measured by the sensor 30 is e.g. 15°C, i.e. the cabin requires cooling down slightly, the angle α can be within the range of from 45° to ~~60°C~~ 60°. If the temperature measured with the sensor 30 is e.g. 9°C, i.e. the cabin needs to be cooled down significantly, the angle α is close to ~~90°C~~ 90°, e.g. in the range of from ~~75°C to 90°C~~ 75° to 90°.

Please insert the following headings.

On page 1, before line 5, insert the heading “Field of the Invention.”

On page 1, after line 5, insert the heading, “Background of the Invention.”

On page 2, before the paragraph that begins on line 26, insert the heading “Brief Summary of the Invention.”

On page 4, before the paragraph that begins on line 20, insert the heading “Brief Description of the Drawing.”

On page 4, after the paragraph that ends on line 23, insert the heading “Detailed Description of the Drawing.”
